Video Banner 300x300	Video banner must meet the technical requirements for HTML5 banners (Specification of HTML5 banners on Sme.sk); data size: up to 2MB including video. Start sound: 1. After the mouse has been moved to the banner, the sound can be started after a delay of min. 0.5 sec; after leaving the banner, the sound must be turned off; 2. after pressing the 'on / off sound' button; in both versions, the 'Stop / Launch Video' button is required.			
Interscroller	Interscroller - Mobile ad format that uses so-called parallax effect where the content of the creative does not move while scrolling the same way as the content of the site but remains in place (ignoring scrolling). To access additional content, the user must scroll through the advertiser's entire banner. Data limits are up to 400kB after unpacking if they are supplied as a zip. For larger data size or video usage, special pricing fees will apply, with a maximum size of 1.5MB, even when using video. In the case of a fixed format size delivery (not a static image or responsive HTML5), the fixed size will be 320x600px. <i>The full Interscroller format specifications in a separate document</i>			

Important notes:

A creative's data volume is all the data that the creative downloads to a visitor's device. Unless otherwise agreed, we accept creatives only in the form of a separate creative and specially measured codes (we do not accept serving codes). If third-party tracking impersonation codes are used, send these codes in the form of a tracking pixel (alias img line). Page requests will be sent via HTTPS (HTTPS) or HTTP. All ads that will send metering pixel, asset, or data requirements must use the same protocol as the site or have the default HTTPS (SSL) set up. Pixels for display counting must always use HTTPS (SSL). All HTML5 ads must have back-up ads that support basic HTML5 without any problems, to ensure full functionality in all modern browsers. Flash Backup is not supported.
